

Relational Constraints introduction

- Referencing
- Differentiate between Primary key and Foreign key
- Identify a parent table and dependent table

Relational Model Concepts

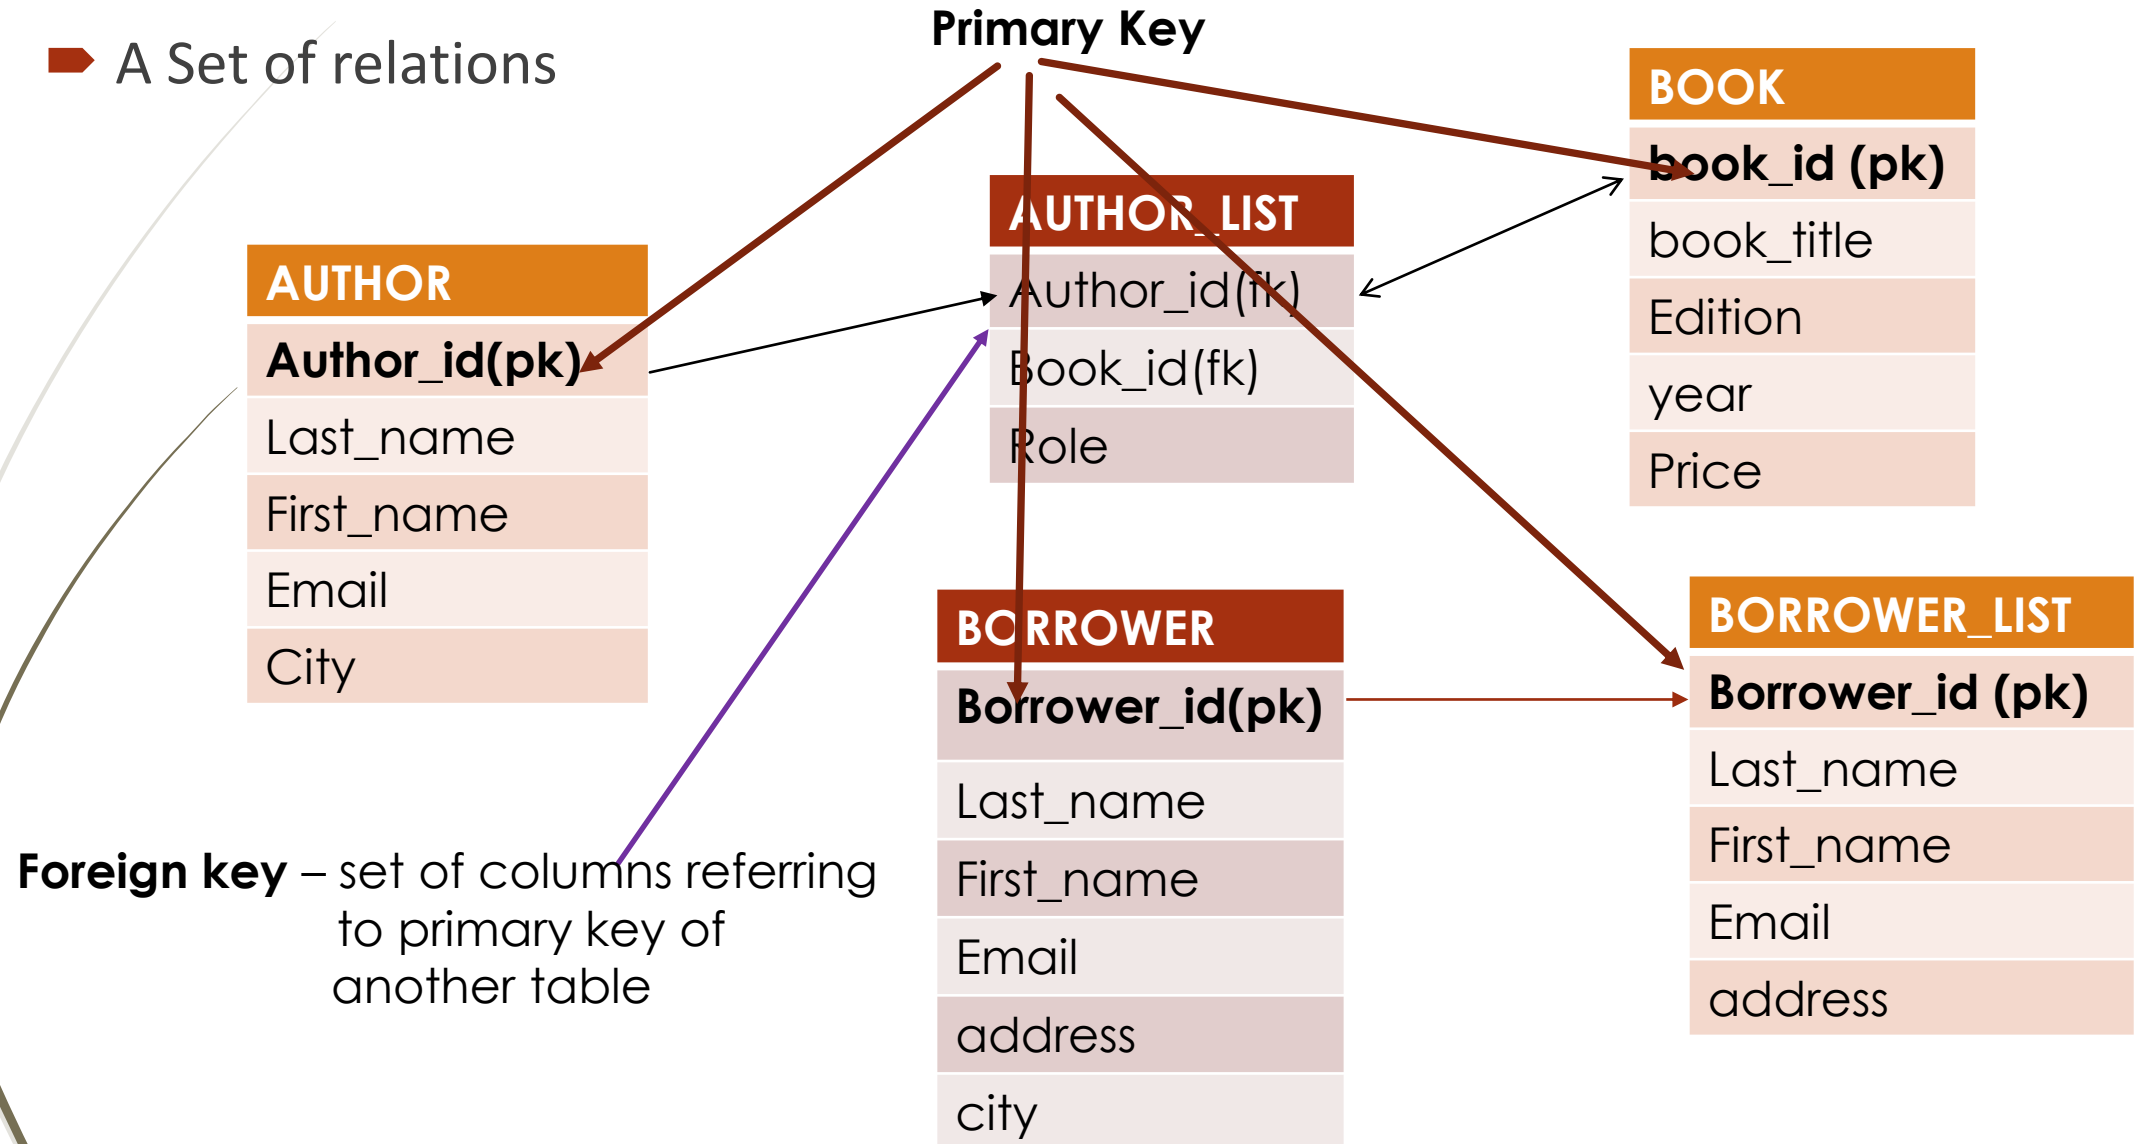

➤ Business rules

Primary key – uniquely identifies each row in a table

E-R Diagram

➤ A Set of relations

Relation Model terminology

- **Parent table** – a table containing a primary key that is related to at least one foreign key.
 - **Dependent table** – a table containing one or more foreign keys.
-
